CATALOG No.363-2E

Linear Motor Series

# GLM

Flat Type with Core

\* The connector box is supported only on GLM20AP.

GLM is equipped with an AC linear servo motor with a core. An exceedingly strong magnetic field generated by a coil of wire surrounding an iron core provides the motor with characteristics such as high thrust and high acceleration/deceleration despite its small volume.

### Structure diagram of Caged Ball LM Guide Model SSR

Caged Ball LM Guide Model SSR, equipped with caged balls that eliminate mutual friction between balls, has achieved low noise, good sound quality, long-term maintenance-free operation, long life, and high speed.

## Features

### 1 High speed

The linear motor actuator, being capable of converting electromagnetic forces directly to linear motions, achieves high speeds even with long strokes.

GLM10 realizes the series' maximum speed of 4 m/s.  
Other models can realize the maximum speed of 3 m/s.

### 2 High acceleration/deceleration and trackability

The use of aluminum parts in the slider has achieved weight reduction and realized high acceleration and deceleration of 2G.

Furthermore, the light weight and high rigidity of the slider have realized high trackability.

### 3 High accuracy

The full-closed control of the linear encoder\* realizes a high positioning accuracy.

\* Full-closed control: A method to directly detect the position of the moving slider using the linear encoder.

### 4 Long stroke

The linear motor actuator, to which magnetic plates can be added, supports long strokes that cannot be realized by a ball screw drive.

Furthermore, GLM20AP can support even longer strokes when joint base configuration is used.

### 5 Multi-slider support

More than one slider can be placed on the base of one axis, and each of them can be controlled independently.

### 6 Conformance to overseas standard

If a GLM model with a cable chain is selected, the acquisition of CE marking is supported.

Furthermore, GLM20AP is equipped with a newly designed motor to reduce temperature rises and support the UL standards.

The linear motor actuator realizes high speeds, high acceleration and deceleration, high accuracy, and conforms to safe and reliable overseas standard.

# GLM20AP

## Model configuration

Model number	Number of sliders/motor type	Stroke	Encoder/resolution	Magnetic pole sensor	Driver
GLM20AP	S	0490	R01K	J	TDP20

① **GLM20AP**

② **S:** S type  
**M:** M type  
**L:** L type  
**2S:** S type x 2 (Multi-slider)  
**2M:** M type x 2 (Multi-slider)  
**2L:** L type x 2 (Multi-slider)

③ **0130:** 130 mm  
to  
**2650:** 2650 mm

④ **G10K:** 10.0 μm  
**G05K:** 5.0 μm  
**R01K:** 1.0 μm

⑥ **TDP20:**  
Driver TDP 200 VAC specifications

② Number of sliders + Motor type  
Example: **2S**  
2: Slider x 2  
S: S type  
Note) If there is one slider, there is no symbol for the number of sliders. If there are two sliders or more, contact THK.

③ See Table 1, "List of strokes."  
\* For details, see the GLM20AP dimension diagram (-> P.12 to 17).

④ See Table 2, "List of encoders."  
Note) The maximum speed and repetitious positioning accuracy of the actuator vary depending on the encoder resolution.

⑤ The specification without a magnetic pole sensor detects the magnetic pole by servo ON input. While detecting the magnetic pole, the rod fluctuates a few millimeters from side to side for about 10 seconds. The magnetic pole detection may fail if an excessive load is applied to the slider, the work loaded on the slider has a barycentric position that is overhung, or an external force or high resistance acts on the slider. In this case, the specification with a magnetic pole sensor is recommended.

⑥ Driver + Input power voltage

TDP: Driver TDP  
20: 200 VAC specification

Table 1. List of strokes

③ Stroke		****															
Stroke [mm]	S type	0130	0310	0490	0670	0850	1030	1210	1390	1570	1750	1930	2110	2290	2470	2650	
	M type	-	0160	0340	0520	0700	0880	1060	1240	1420	1600	1780	1960	2140	2320	2500	
	L type	-	-	0200	0380	0560	0740	0920	1100	1280	1460	1640	1820	2000	2180	2360	
Base length [mm]		400	580	760	940	1120	1300	1480	1660	1840	2020	2200	2380	2560	2740	2920	
Total actuator length [mm]		420	600	780	960	1140	1320	1500	1680	1860	2040	2220	2400	2580	2760	2940	

Note 1) The stroke is different if a multi-slider is used. For details, contact THK.

Note 2) The standard base length is recommended because the design complies with the magnet length.

Note 3) Maximum length of the single base is 4400mm. For joint base configuration, select an encoder made by Magnescale Co., Ltd. or HEIDENHAIN Inc.

Table 2. List of encoders

④ Encoder/resolution		****															
Encoder manufacturer	Model number	Resolution [μm]		Repetitious positioning accuracy [μm]		Maximum speed [m/s]											
Magnescale Co., Ltd.	PL25	G10K	10.0	±10	3.0												
Magnescale Co., Ltd.	PL25	G05K	5.0	±5													
RENISHAW Inc.	RGH22X	R01K	1.0	±1													
HEIDENHAIN Inc.	LIDA277	H01K	1.0														
RENISHAW Inc.	RGH22Z	R500	0.5		1.5												
RENISHAW Inc.	RGH22Y	R100	0.1		0.3												

Note 1) The linear motor has different maximum speed and repetitious positioning accuracy depending on the encoder resolution.

Note 2) The maximum speed may be limited depending on the encoder to be used. For details, see the GLM20AP basic specifications (-> P.8).

Note 3) The resolution is the value after multiplying by 4.

Table 3. Drivers

⑥ Driver		****	
⑥ Driver	Motor type	Attached driver	
TDP20	SType	TDP-045CU-200AC-GA20SU-① <sup>1</sup> -② <sup>2</sup>

## Driver

\* GLM20AP consists of an actuator as the main body and a driver TDP provided with it.

If a driver TDP to be used for maintenance is needed, please order it with the following model number.

TDP
- 045CU
- 200AC
- GA20SU
- 1U
- N

①
②
③
④
⑤
⑥

① Model number	TDP
② Capacity	045CU: 450 W (For S type motor) 075CU: 750 W (For M type motor) 100CU: 1 kW (For L type motor)
③ Input power	200AC: Single/three-phase 200 VAC * The 1-kW capacity specifications support only the input power of three-phase 200 VAC.
④ Motor type	GA20SU : GLM20AP S type GA20MU : GLM20AP M type GA20LU : GLM20AP L type
⑤ Resolution (numeric value + unit)	10U : 10.0 μm 5U : 5.0 μm 1U : 1.0 μm 500N : 0.5 μm 100N : 0.1 μm
⑥ Magnetic pole sensor	N: Without magnetic pole sensor J : With magnetic pole sensor

## Cable

\* GLM20AP consists of an actuator as the main body and a motor cable, encoder cable, and magnetic pole sensor cable provided with it.

If a cable to be used for maintenance is needed, please order it with the following model number according to the specifications of the linear encoder.

### ● Case of specifications of optical linear encoder (RENISHAW Inc.)

Setup tool

● Digital operator

D - CON2  
①

① Type	D-CON2: Digital operator (-> P.21)
--------	------------------------------------

Note) D-CON2 is not provided with the actuator or the driver TDP. Please order them with the above model number.

● Communication cable (PC communication cable RS-232C when using D-Assist)

K232 - 01  
①

① Cable length	01: 1 m
----------------	---------

Note) D-Assist Ver.2 is a required tool to change the driver TDP parameter settings. The use of USB cables on the driver TDP is supported. For details of USB cables, contact THK. Communication cables are not provided with the actuator or the driver TDP. Please order them with the above model number. For details about D-Assist Ver.2, see P.21.

Encoder adjustment device

APS27  
①

① Type	APS27: Encoder adjustment device (-> P.21)
--------	--

Note) APS27 is an encoder adjustment device used to evaluate the installation tolerance of LIDA277 with TTL interface (HEIDENHAIN Inc.). Although the encoder has been adjusted at the shipment of the actuator, it is needed for readjustment during maintenance and inspection, etc.

# GLM20AP

## Basic Specifications

Item	Motor type	S type					M type					L Type				
Driver model number		TDP-045CU-200AC-GA20SU					TDP-075CU-200AC-GA20MU					TDP-100CU-200AC-GA20LU				
Main circuit power voltage		Single/three-phase 200 VAC					Single/three-phase 200 VAC					Three-phase 200 VAC				
Maximum thrust <sup>*1</sup> [N]		336					618					954				
Rated thrust <sup>*1</sup> [N]		118					220					344				
Maximum speed <sup>*2</sup> [m/s]		3.0	3.0	3.0	1.5	0.3	3.0	3.0	3.0	1.5	0.3	3.0	3.0	3.0	1.5	0.3
Resolution [μm]		10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1	10.0	5.0	1.0	0.5	0.1
Repetitious positioning accuracy [μm]		±10	±5	±1			±10	±5	±1			±10	±5	±1		
Maximum transportable weight <sup>*3</sup> [kg]		46.1					86.1					134.6				
Assumed transportable weight <sup>*4</sup> [kg]		7.7					15.0					24.5				

\*1 When the average temperature of the armature winding is 90°C under an ambient temperature of 20°C.

\*2 The maximum speed varies depending on the resolution.

Example: The maximum speed is 0.3 m/s when the motor type is S, the driver model number is TDP-045CU-200AC-GA20SU, and the resolution is 0.1 μm.

\*3 The specifications of the operating speed, acceleration/deceleration, etc. are limited by the load weight. See "Selection Method for Linear Motors" on P.511 to 520.

The maximum transportable weight is a weight that can be driven at an approximate acceleration of 0.5 G.

\*4 The assumed transportable weight is a weight that can be driven for a certain stroke at a duty ratio of 50 % with an approximate acceleration of 2 G and a maximum operating speed of 1.0 m/s.

Depending on the operating conditions, the movable weight may change under the influence of the thrust and speed characteristics.

# Thrust/Speed Characteristics

[200 VAC Specifications]

Motor type: S type  
Driver: TDP-045CU-200AC-GA20SU

Motor type: M type  
Driver: TDP-075CU-200AC-GA20MU

Motor type: L type  
Driver: TDP-100CU-200AC-GA20LU

Maximum area  
 Continuous area

Note) The thrust and speed characteristics shown above are values that take into consideration the sliding resistance component of the LM guide due to the slider attractive force and slider weight.

# Transportable Weight and Acceleration

Note) At a maximum operating speed of 1.0 m/s, the unit can be driven for a certain stroke at a duty ratio of 50 % at this weight. For details about selection, see "Selection Method for Linear Motors" on P.511 to 520.

# Driver TDP Specifically Designed for Linear Motor Drive

Model number	Main circuit power voltage	Outer dimensions/ weight	Power supply capacity [kVA]	Appearance	Supported linear motor actuator
TDP-045CU-200AC	Single/ three-phase AC200V	W: 60mm H: 188mm L: 125mm  Weight:1.0kg	1.4	 CE	GLM20AP-S 
TDP-075CU-200AC	Single/ three-phase AC200V	W: 65mm H: 188mm L: 162mm  Weight:1.3kg	1.9	 CE	GLM20AP-M 
TDP-100CU-200AC	Three-phase AC200V	W: 94.5mm H: 188mm L: 165mm  Weight: 2.0kg	2.3	 CE	GLM20AP-L 

## Features

### 1. Driver specifically designed for linear motor drive

This is the driver specifically designed for linear motor drive to get the most out of the features of the linear motor actuator, i.e., high speed, high acceleration/deceleration, and constant velocity.

### 2. Auto tuning

Equipped with an auto tuning function. Reduces the time required for adjustment operations.

### 3. Conformance to safe and reliable international standards

All the electronic parts/printed circuit boards and sheet metals/coating are compliant to RoHS directive. Increased reliability and safety by acquiring CE marking and UL standards. Also, fully compliant to THK Green Procurement.

### 4. Rich lineup of setup tools

The digital operator D-CON2 and PC software D-Assist Ver.2 facilitates the setup of parameters, etc.

## Setup tool

To change parameters for driver TDP, D-CON2 or D-Assist is required.

### Digital operator D-CON2

W: 83 mm  
H: 141 mm  
T: 23 mm

#### Features

##### Quick setup

Just connecting the unit to the driver TDP enables quick setup.

##### Easy operation

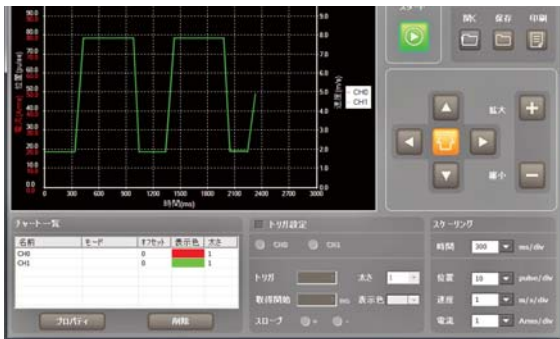

With sheet keys and clear LCD (16 characters x 2 rows), parameters can be set easily.

#### Functions

- Check/change/write/save parameters
- Monitoring (I/O, position, alarm, effective load factor)
- JOG/FEED operation
- Set communication speed

Note) D-CON2 is not included with the product. If required, please place an order separately.

### PC software D-Assist

#### Features

##### Easy operation on PC

In addition to D-CON2, parameters can also be set on your PC. Operation status can be observed with waveform display.

##### PC software is available for free on Web site

PC software can be downloaded for free after logging into the following Technical Support site:  
(available in English/Japanese/Simplified Chinese)  
<http://tech.thk.com/>

#### Functions

- Supported OS: Windows XP, Vista, and 7
- Auto tuning function settings

Note) Either PC communication cable K232-01 or a USB cable is required. For details of USB cables, contact THK.

## Encoder adjustment device

\* Only for the HEIDENHAIN Inc. optical linear encoder specifications

### Encoder adjustment device APS27

APS27 is an encoder adjustment device used to evaluate the installation tolerance of the LIDA277 with TTL interface (HEIDENHAIN Inc.). Although the encoder has been adjusted at the shipment of the actuator, it is needed for readjustment during maintenance and inspection, etc. To perform adjustment, either connect LIDA277 via the PS27 test connector to the encoder cable or operate the PG27 test unit directly. The installation has been correctly done if the LEDs for incremental signals and origin signals light up in green. The readjustment of installation is required if either of the LEDs lights up in red.

APS27	
Encoder	LIDA277
Function	Pass/fail evaluation of TTL signals (Incremental signals and origin signals)
Accessories	PS27: Test connector PG27: Test unit PG27 power supply unit (110 to 240 VAC, including an adapter plug) Light shielding film

## Specifications

Driver model number TDP-		045CU-200AC	075CU-200AC	100CU-200AC
Supported motor type	GLM20AP	S	M	L
Main circuit power supply	Voltage/frequency	Single/three-phase 170 to 250 VAC 50/60Hz		Three-phase 170 to 250 VAC 50/60Hz
Control circuit power supply	Voltage/frequency	Single-phase 170 to 250 VAC 50/60 Hz		
Power supply capacity [kVA]		1.4	1.9	2.3
Control specifications	Control method	Single or three-phase full-wave rectification IGBT, PWM control, sine wave drive method		
	Feedback	Two-phase pulse (phase A + phase B) with 90° phase differential		
Command input pulse	Type	Select one of the following: sign + pulse column, CCW + CW pulse column, or two-phase pulse (phase A + phase B) with 90° phase differential		
	Form	Line driver (+5 V level)		
	Frequency	Up to 5 MHz		
LED display		Charge LED, internally-powered LED x 5, seven segment LED two digits, display LED x 3		
I/O signal	Positional signal output	Phases A, B, Z: Line driver output		
	Sequence input	Photocoupler input: Servo on, forward run prohibited, reverse run prohibited, alarm reset, reference pulse inhibit, DB input, universal input x 2		
	Sequence output	Photocoupler output: Servo alarm, alarm code (3 bits), positioning completion, servo ready, universal output x 2		
Operating environment	Operating/storage temperature	Operating temperature: 0 to +50 °C Storage temperature: -20 to +85°C (non-freezing)		
	Operating/storage humidity	90 % RH or below (non-condensing)		
Vibration/shock resistance		2G (JIS C60068-2-6) /100G (JIS C60068-2-27)		
Line noise tolerance		1500 V 500 ns common mode, normal mode		
Communication function		RS232C x 1 port, miniUSB x 1 port: PC software, digital operator connection, status display (I/O), parameter setting, alarm display, JOG operation, auto tuning <sup>*1</sup>		
Protective function		Regeneration overload, IPM module error, motor overcurrent (phases U and V), main circuit overvoltage/insufficient voltage, motor overload, encoder alarm, system alarm, driver overheat, excess location deviation, abnormal motion error detection (when servo is on), EEPROM error, magnetic pole detection error, electrical thermal, parameter setting error, software limit, origin return time exceeded, abnormal operation alarm		
Weight [kg]		1.0	1.3	2.0

\*1 The auto tuning function is not available for use with the digital operator.

## GLM20AP Selection Method

Select the linear motor following the procedure below.

\* If you provide the usage conditions, THK can select a recommended model number.  
Please contact THK.

### 1. Evaluate the maximum thrust ratio

---

Make sure that the maximum thrust of the motor exceeds the required thrust for operations.  
It is recommended to use with **80% or less** of the maximum thrust by load fluctuations into account.

### 2. Evaluate the RMS thrust ratio

---

Make sure that the rated continuous thrust of the motor exceeds the required RMS thrust.  
It is recommended to use with **70% or less** of the rated continuous thrust by taking load fluctuations into account.

\* It is recommended to use with 60% or less of the the rated continuous thrust when using the actuator in a ceiling mount.  
Please contact THK for details.

### 3. Confirm the specifications of the selected model number

---

Check the detailed specifications of the model number selected using the above process, to ensure that external dimensions, stroke, maximum speed, resolution and positioning repeatability all satisfy the requirement.

### 4. Selection of regenerative resistor

---

A regenerative resistor may be required depending on the operating conditions.  
Check the "GLM20AP Instruction Manual" and Evaluation of regenerative resistor (→ P.32) for the selection method.

**Calculation conditions**

$m_1$	Payload	[kg]
$m_2$	Slider mass	[kg]
$V$	Motion speed	[m/s]
$g$	Gravitational acceleration (9.807m/s <sup>2</sup> )	
$\mu$	Friction coefficient	
$\alpha$	Acceleration	[m/s <sup>2</sup> ]
$L$	Stroke	[m]
$P$	Motor attraction force	[N]
$f$	Sliding resistance of LM block	[N]
$n$	No. of LM blocks being used	
$T$	1 cycle time	[s]
$t_1$	Acceleration time	[s]
$t_2$	Constant speed time	[s]
$t_3$	Deceleration time	[s]
$t_4$	Stop time	[s]

**Data for selection**

Motor type	S type	M type	L type
Slider mass: $m_2$ [kg]	5.3 (5.1)	9.1 (8.9)	12.9 (12.7)
Motor attraction force: $P$ [N]	1232	2547	3728
No. of LM blocks being used: $n$ [pcs]	4	6	8
Sliding resistance of LM block: $f$ [N]	3.7		
Friction coefficient: $\mu$	0.01		
Maximum load capacity [kg] *1	46.1	86.1	134.6
Estimated load capacity [kg] *2	7.7	15.0	24.5

Note: The values in ( ) are for the specifications without the magnetic pole sensor.

\*1 Speed or acceleration/deceleration may be reduced by the payload mass. See "GLM20AP Selection Method" on Pages 27 to 31.

The maximum load capacity is the mass that can be driven with the acceleration of approx. 0.5G.

\*2 The estimated load capacity is the mass that can be driven with the acceleration of approx. 2G, with the maximum speed of 1.0 m/s, and at a duty factor of 50% of a constant stroke.

However, operable mass may vary as it may be affected by thrust-speed characteristics depending on speed.

**Table 1. Permissible driver regenerative energy**

Driver model no.	Permissible regenerative energy $E_2$ [J]	Minimum permissible resistance [ $\Omega$ ]	Regenerative power [W]			
			RH120 100 $\Omega$	RH150 100 $\Omega$	RH220 100 $\Omega$	RH300C 100 $\Omega$

**Table 2. External regenerative resistor and reference model for reference**

Name	Type	Specifications	Manufacturer
Regenerative resistor	RH*** 100 $\Omega$ *	Without thermostat	Iwaki Musen Kenkyusho
	RH*** 100 $\Omega$ * -*** B	With thermostat (external)	
	RF*** 100 $\Omega$ * -*** B	With thermostat (internal)	
Female plug: 2-pole Pin pitch: 5.08mm	231-302/026-000		WAGO

Note: \* under the Type column of the regenerative resistor indicates, from the left toward the right, the power, permissible resistance, and thermostat temperature, respectively. For details, refer to the manufacturer's catalog.

## Evaluating the maximum thrust ratio

The required maximum thrust  $F_{\max}$  is the largest value out of the values calculated by the following three formulas:

Load force:  $F$  [N]

$$F = \mu \times m_1 \times g$$

Thrust during acceleration:  $F_a$  [N]

$$F_a = (m_1 + m_2) \times \alpha + F$$

Thrust during deceleration:  $F_{d1}$  [N]

$$F_{d1} = (m_1 + m_2) \times \alpha - F$$

Required maximum thrust  $F_{\max}$ : Maximum value of  $F$ ,  $F_a$  and  $F_{d1}$  above

Find the maximum thrust  $F_{\text{peak}}$  of the actuator at the motion speed from the thrust-speed characteristics chart in product specifications ( $\rightarrow$  P.7).

$$\text{Maximum thrust ratio (\%): } \frac{F_{\max}}{F_{\text{peak}}} \times 100 \quad 80\% \text{ or less is recommended.}$$

## Evaluating the RMS thrust ratio

Calculate the RMS (root-mean-square) thrust from the load force, thrust during acceleration, and thrust during deceleration with respect to each duration.

RMS thrust:  $F_{\text{rms}}$  [N]

$$F_{\text{rms}} = \sqrt{\frac{F_a^2 \times t_1 + F^2 \times (t_2 + t_4) + F_{d1}^2 \times t_3}{T}}$$

Also, from the motion profile, average speed:  $V_{\text{ave}}$  is calculated.

Average speed:  $V_{\text{ave}}$  [m/s]

$$V_{\text{ave}} = \frac{L}{T \text{ (1 cycle time)}}$$

Find the rated continuous thrust  $F_{\text{cont}}$  of the motor from the thrust-speed characteristics chart in product specifications ( $\rightarrow$  P.7).

$$\text{RMS thrust ratio (\%): } \frac{F_{\text{rms}}}{F_{\text{cont}}} \times 100 \quad 70\% \text{ or less is recommended.}$$

## Evaluating the regenerative resistor

Use the following formula to calculate the thrust during deceleration.

Thrust during deceleration:  $F_{d2}$  [N]

$$F_{d2} = (m_1 + m_2) \times \alpha - [(m_1 + m_2) \times g + P] \times \mu + f \times n$$

Regeneration energy:  $E_1$  [J]

$$E_1 = F_{d2} \times t_3 \times \frac{V}{2}$$

Check the permissible regenerative energy  $E_2$  of the driver to be used. (→ P.28 Table 1)

If  $E_2 < E_1$ , regeneration resistor is required.

Required capacity of regenerative resistor:  $W_K$  [W]

$$W_K = \frac{(E_1 - E_2)}{0.2 \times T}$$

## Example of Selection

The examination below shows that if GLM20AP-S type can drive a payload of 10kg along the following motion profile:

Selection model	: GLM20AP-S type 200VAC specifications without magnetic pole sensor
Payload	: $m_1 = 10$ [kg]
Slider mass	: $m_2 = 5.1$ [kg]
Motion speed	: $V = 1.0$ [m/s]
Acceleration	: $\alpha = 10$ [m/s <sup>2</sup> ]
Stroke	: $L = 1.0$ [m]
Friction coefficient	: $\mu = 0.01$
Gravitational acceleration	: $g = 9.807$ [m/s <sup>2</sup> ]

Figure: Motion profile

### (1) Evaluating the required maximum thrust ratio

The required maximum thrust is the largest value out of the values calculated by the following three formulas.

$$\begin{aligned} \text{Load force} \quad &: F = \mu \times m_1 \times g \\ &= 0.01 \times 10 \times 9.807 \\ &= 1.0 \text{ [N]} \end{aligned}$$

$$\begin{aligned} \text{Thrust during acceleration} \quad &: F_a = (m_1 + m_2) \times \alpha + F \\ &= (5.1 + 10) \times 10 + 1.0 \\ &= 152.0 \text{ [N]} \end{aligned}$$

$$\begin{aligned} \text{Thrust during deceleration} \quad &: F_{d1} = (m_1 + m_2) \times \alpha - F \\ &= (5.1 + 10) \times 10 - 1.0 \\ &= 150.0 \text{ [N]} \end{aligned}$$

From the above calculation results:

Required maximum thrust:  $F_{\max} = F_a = 152.0$  [N]

Thrust-speed characteristics chart (Figure) for GLM20AP-S type shows that the thrust of the motor's maximum thrust:

$F_{\text{peak}}$  (at speed = 1.0m/s) = 325 [N]

Therefore, the ratio of the required maximum thrust to the motor's maximum thrust is:

$$\frac{F_{\max}}{F_{\text{peak}}} \times 100 = \frac{152}{325} \times 100 = \underline{47[\%]} (\leq 80\%)$$

Motor type : S type  
Driver : TD-045CU-200AC-GA20SU

Figure: Thrust-speed characteristics chart

(2) Evaluating the RMS thrust ratio

Calculate the RMS (root-mean-square) thrust from the load force, thrust during acceleration, and thrust during deceleration with respect to each duration.

RMS thrust:

$$F_{rms} = \sqrt{\frac{F_a^2 \times t_1 + F^2 \times (t_2 + t_4) + F_{d1}^2 \times t_3}{T}}$$

$$= \sqrt{\frac{152.0^2 \times 0.1 + 1.0^2 \times (0.9 + 0.5) + 150.0^2 \times 0.1}{1.6}}$$

$$= 53.4 \text{ [N]}$$

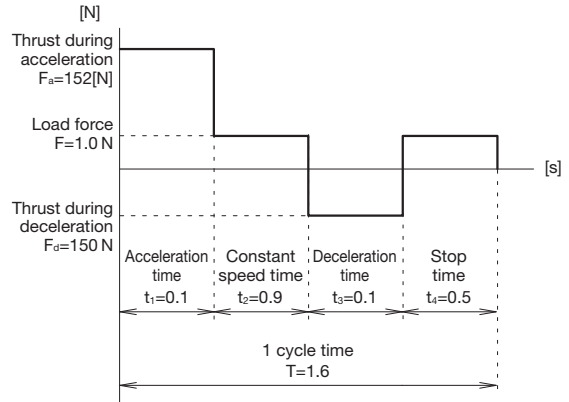

Figure: Thrust and time

Also, from the motion profile, average speed :  $V_{ave}$  is calculated:

$$V_{ave} = \frac{L}{T} = \frac{1.0}{1.6} = 0.625 \text{ [m/s]}$$

Thrust-speed characteristics chart for GLM20AP-S type shows that the thrust of the motor's rated continuous thrust:

$F_{cont}$  (at the time of average speed 0.625m/s) = 111.5 [N]

Therefore, the RMS thrust ratio for the rated continuous thrust is:

$$\frac{F_{rms}}{F_{cont}} \times 100 = \frac{53.4}{111.5} \times 100 = 48[\%] (\leq 70\%)$$

As the result above, of the maximum thrust ratio and RMS thrust ratio, this application shall be concluded operative.

Motor type : S type  
Driver : TD-045CU-200AC-GA20SU

Figure: Thrust-speed characteristics chart

### (3) Evaluating the regenerative resistor

Determine whether or not a regenerative resistor is required, by comparing the value calculated from the thrust during deceleration, deceleration time and motion speed with the permissible regenerative energy of the driver.

Use the following formula to calculate the thrust during deceleration.

$$\text{Thrust during deceleration} : F_{d2} = (m_1 + m_2) \times \alpha - [(m_1 + m_2) \times g + P] \times \mu + f \times n = 122.4 \text{ [N]}$$

$$\text{Motor attraction force} : P = 1232 \text{ [N]}$$

$$\text{Sliding resistance of LM block} : f = 3.7 \text{ [N]}$$

$$\text{No. of LM blocks} : n = 4 \text{ (for GLM20AP-S)}$$

$$\text{Deceleration time} : t_3 = 0.1 \text{ [s]}$$

$$\text{Cycle time} : T = 1.6 \text{ [s]}$$

$$\text{Motion speed} : V = 1.0 \text{ [m/s]}$$

$$\text{Regenerative energy in the above case: } E_1 = F_{d2} \times t_3 \times \frac{V}{2} = 6.12 \text{ [J]}$$

From Table 1 on P.27, the permissible regeneration of the driver being used (TD-045CU-200AC-GA20SU) is:

$$E_2 = 4.5 \text{ [J]}$$

Because  $E_2 < E_1$ , an external regenerative resistance is required.

$$\text{The required capacity of the external regenerative resistor is: } W_K = \frac{(E_1 - E_2)}{0.2 \times T} = \underline{\underline{5.06 \text{ [W]}}}$$

The 0.2 term in the above formula is the value where the load factor for the external regenerative resistor is 20%.

Because the required capacity of the external regenerative resistor is 5.06 W, select a recommended regenerative resistor model number with the capacity of 5.06W or more.

\* Minimum permissible resistance of TD-045CU-200AC-GA20SU = 100 [ $\Omega$ ]

Therefore, select the RH120 100 $\Omega$  (70W) [Iwaki Musen Kenkyusho].

Note 1: Check with the manufacturer for detailed specifications of the external regenerative resistor, including load characteristics and thermostat specifications.

Note 2: If an external regenerative resistor is required, the customer is to provide the connector ( $\rightarrow$  P.28 Table 2).

Application Example

Laser marking

Machining, assembly

Model No.

CSKR and GLM are used for the section that moves the laser. By using CSKR, clean series, and GLM, a series that drives the load without physical contact and generates little dust, application in a clean room has been made possible.

CSKR GLM

Printer

Other

Model No.

GLM is used for the transfer section of the head. By using GLM that boasts of a high precision and a high resolution, high-definition printing is possible.

GLM LM Guide

Liquid crystal glass inspection equipment

Inspection

Model No.

GLM that supports long stroke and high speed is used. By using GLM, increase in work size and improvement in takt time have been made possible.

KR GLM

Dispenser

Machining, assembly

Model No.

SKR and GLM are used for the dispenser section. The use of a linear motor delivers high-speed and smooth operation, improving the dispensing accuracy.

SKR GLM

Nut runner

Machining, assembly

Model No.

VLACT is used for the elevating section of a screw tightening machine and GLM is used for the transfer section. By performing independent control operations with a multiple-slider model in the linear motor series, productivity can be improved.

GLM VLACT

Glass substrate inspection equipment

Inspection

Model No.

GLM and SKR are used for the camera transfer section of the inspection equipment. By using the portal structure, large-sized work can be supported.

GLM SKR

## | Maximum thrust |

Indicates the largest value of the force that the slider can generate instantaneously.

## | Magnetic pole sensor |

The sensor that identifies N and S poles of the magnet. This is used to detect the relative position between the coil and polarity of the permanent magnet.

## | Optical linear encoder |

A position detector that detects the position of the slider by using light (laser light). This is used for applications that require high precision and high resolution.

## | Magnetic linear encoder |

A position detector that detects the position of the slider by using magnetism. This possesses superb environmental resistance compared to the optical type.

## | CE compliance |

Statutory safety logo for the products sold in the EU region. For the unit products such as drivers, etc., obtaining the CE compliance approval became fully compulsory from January 1996 by the EMC directive and low voltage directive.

(1) EMC Directive

- Immunity test: Capacity to withstand noise from outside
- Emission test: Capacity to reduce the release of noise to outside

(2) Low Voltage Directive

- Requirement of electric safety for the electric products that are operated by the power source of 50 to 1000VAC and 75 to 1500VDC.

## | RoHS Directive |

This is a hazardous substances control act enforced by EU on July 1, 2006, prohibiting electric and electronic equipment to contain the specified hazardous substances. If the products contain the hazardous substances that are controlled by this directive, they cannot be sold within the EU region.

## | UL Standard |

UL stands for Underwriters Laboratories Inc., a nonprofit organization in the United States. The UL standard created by UL has garnered public trust as the highest authority for safety standards, and UL Marking is used by many state and local governments in the US.

UL has been approved as the certification and testing agency in Canada by the Canadian Standards Association, and is recognized throughout all states in Canada.

If the products are evaluated in accordance with the safety standards of both America and Canada, and prove that they conform to the standards, they can bear UL Marking, c-UL Marking, or a combination of these.

## | Rated continuous thrust |

Indicates the force that the slider can continuously generate.

## | Maximum load capacity |

Indicates the maximum mass that can be transferred by loading onto the actuator.

\* THK defines the maximum load capacity as the mass that can be transferred with approx. 0.5G acceleration. For actual selection, see Selection Method (P.27 to 33) in this catalog and please contact THK.

## | Resolution |

Minimum travel distance that can be set.

Note: This does not guarantee the positioning accuracy.

## | Positioning repeatability |

Position to a given point from the same direction seven times, measure the stopping points and then calculate the value of half the maximum difference of the reading. Perform this measurement at the center and at both ends of the travel distance; the largest value becomes the measurement value, and the positioning repeatability is expressed by placing the symbol "±" next to the value of half the maximum difference.

= 1/2 of the maximum difference between  $t_1$   $t_2$ ... $t_7$

## | THK green procurement |

THK Group, through the development of its business activities as well as the social life of each employee, acknowledges that we are deeply related to the global environment, and thus would like to effectively tackle reducing environmental impact. When procuring raw materials and parts used in the production of the products, or those indirect materials and tools used in the production processes, THK Group implements the measures to consider reducing their impact on the environment.

## Precautions on Use

### ● Environment

- The wrong environment can cause failure for the actuator and driver. The best places to use the device are as follows:
- For actuators, an environment with a room and ambient temperature from 0 to 40 °C and humidity of no more than 80% RH that will not expose the product to freezing or condensation.
  - For drivers, an environment with a room and ambient temperature from 0 to 50 °C and humidity of no more than 90% RH that will not expose the product to freezing or condensation.
  - A place free from corrosive gas or flammable gas.
  - Places where none of the following are flying around: iron particles, or any other conductive particles, dust, oil mist, cutting fluid, water, salt, organic solvents.
  - Places that are not exposed to direct sunlight or radiant heat.
  - Places where no strong electric fields or strong magnetic fields occur.
  - Places where vibration or impact are not transmitted to the unit.
  - Places that are easy to inspect and clean.

### ● Safety Precautions

- This product consists mostly of heavy items (20 kg or more). When moving heavy items, use 2 or more people or moving equipment. Otherwise, injury or damage may occur.
- When transporting and installing this unit, mount the supplied eye nut to the base and attach the slider fixing screw. Always remove the eye nut and slider fixing screw when operating the actuator.
- Do not drop or knock this product. Doing so may cause injury or damage the unit.
- Unnecessarily disassembling this product may allow foreign objects to enter and reduce functionality. Also, there is a risk of electric shock from the driver.
- The PL seal is attached to the magnetic plate, the end plate, the slider and the connector box of the actuator unit.
- The magnetic plate (stator) is a very powerful magnet. Keep magnetic bodies (particularly metals) away from the magnet plate. There is a risk of getting the finger(s) jammed between the metal body and the magnet due to the attractive force of the magnet. Also, persons using cardiac pacemakers should absolutely stay away from the magnet.
- Never touch the moving section of the actuator when it is energized. Also, when the product is in motion, or in a state of readiness for motion, do not enter the movement zone of the actuator.
- When carrying out installation, adjustment, inspection or maintenance of the actuator unit, driver or connected associated devices, always remove all plugs from the power sockets, and use locking or safety plugs etc. so that no one but an operator can turn on the power again. Also, display a notice explaining what work is in progress in a position that is readily seen.
- If two or more people are involved in the operation, confirm the procedures such as sequences, signs, and abnormalities in advance, and appoint another person for monitoring the operation.
- Read the manual carefully, understanding the content properly, and be sure to observe all safety precautions.
