Low-Backlash Planetary  
Gear Reducer for Servo Motors

More Reduction Ratios! 1/3.7, 1/11, 1/81  
Three-Minute Backlash Available!

Jan. 2007

# IB Series P1 Type

## Low-backlash Planetary Gear Reducer for Servo Motors

### IB Series P1 Type

#### Specification

- Backlash Initial backlash setting is 3 or 15-minute
- Rated torque 10.5-101Nm
- Motor capacity 50W-5000W
- Reduction ratio 1/3.7, 1/5, 1/9, 1/11, 1/15, 1/21, 1/33, 1/45, 1/81
- Allowable maximum input speed 6000r/min
- Reduction system Planetary gear mechanism

#### Features

- **No.1** Compactness in the Industry  
Large diameter precision angular bearing, supporting output shaft, allows large radial load with compact casing.
- Responsiveness to Newest Servo Motors for Simpler Applications!
- Short delivery response

#### Purpose

- Transfer robots
- Peripheral equipment for robots
- FA equipment related
- Semi-conductor production machine
- Machine tools
- Loader drive and shaft motion
- Wrapping machines  
(bag making and pillow wrapping)
- Wood-working machine
- Medical equipment
- Monitoring camera
- Vending machine
- Analyzing machine
- Measuring equipment
- Laser processing machine

## No. 1 Compactness in Our Industry

Significant size and mass reduction in low reduction ratio and medium capacity range.

### New Release

Mass reduced to about 1/3

ANFX-P130N-1ZLD-5  
Mass 8.4kg

### Existing Product

ANFJ-L30-SV-5  
Mass 25kg

Comparison of Reduction Ratio 5 for 3500W

### New Release

Mass reduced to about 1/2

ANFX-P120N-7XLD-5  
Mass 2.7kg

### Existing Product

ANFX-P35N-7XLC-5  
Mass 6.3kg

Comparison of Reduction Ratio 5 for 1500W

## Output shaft Variation

Three variations available to match customers' needs. Optimal selection possible for your application.

Keyless solid shaft type

Flange shaft type

Solid shaft type with keyway

## Assembly

Simple assembly. Directly connect servo motor and reducer with bolt (provided by customer) after delivery. Tighten motor shaft with hexagon wrench. Ready for immediate use.

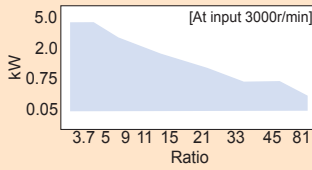

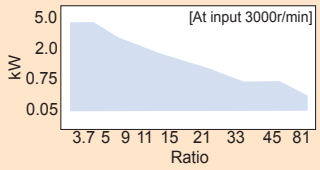

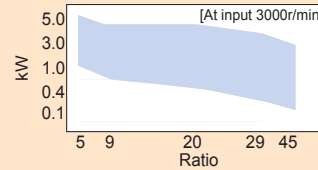

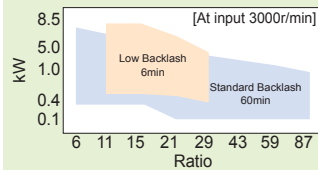

Keyless Type Servo Motor

Input Side Clamp

# Standard Specification, Construction, and Mechanism

## Standard Specification

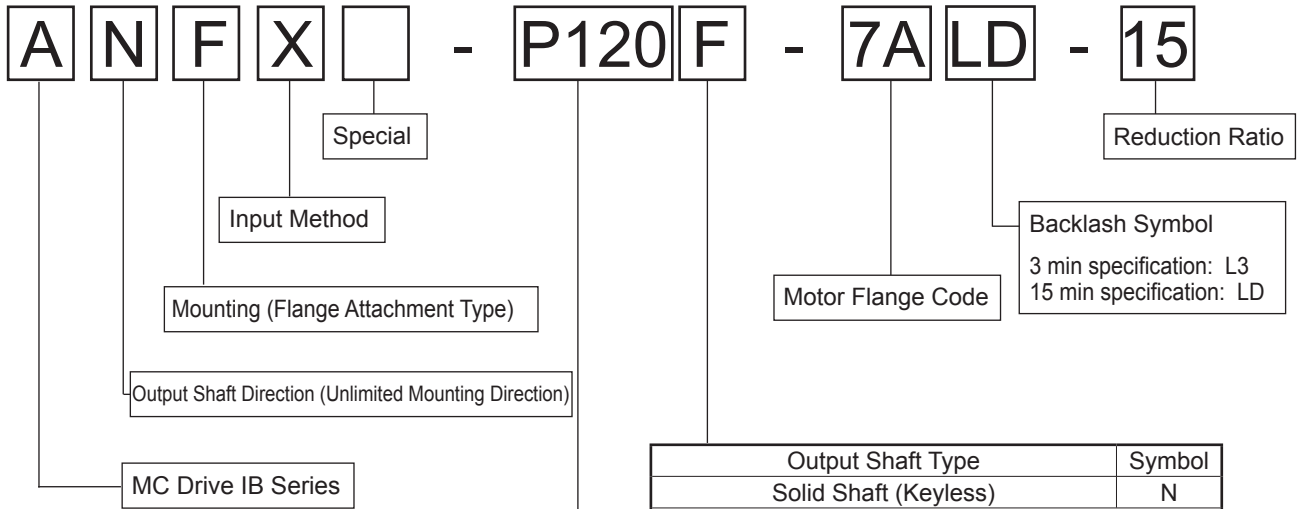

Backlash	Initial backlash setting is 3 or 15-minute.
Efficiency	90% or more at rated output torque (with reduction ratio 3.7, 5, 9)
Noise Level	70dB(A) 0.5m *Varies depending on models and mounting condition.
Lubrication system	Grease lubrication The unit is filled with grease at the time of shipping. It is ready for immediate use.
Reduction system	Planetary gear mechanism Single stage type (Reduction Ratio: 3.7, 5, 9) Double stage type (Reduction Ratio: 11, 15, 21, 33, 45, 81)
Output shaft rotation direction	Same direction as the rotation direction of input gear.
Material	Case with internal gear and gear: Chrome-Molybdenum Steel Joint cover, Adapter plate: Aluminum alloy Output and input shaft: S45C
Mounting location	Indoor (without dust and water)
Ambient temperature	0~40°C Consult us when the operation condition exceeds the above and when special grease is necessary such as food manufacturing machine.
Ambient humidity	85% or less. There should be no condensation.
Altitude	1000m or below
Ambient atmosphere	There should be no corrosive gases, explosive gases, vapor, or dust.
Mounting angle	All angles possible (no limitation)
Paint	Black oxide coating for housing with internal gear Output shaft comes with rustproof treatment at the time of shipping.
Actual reduction ratio	3/11 is the actual reduction ratio for 1/3.7. All of the other reduction ratios are whole numbers.
Surface temperature of the reducer	80°C or below. Consult us when operating continuously.

\*Torque necessary at the input side to rotate the reducer at no load condition.

\*This is the representative value when the ambient temperature is 20°C.

\*Refer to Selection Table 2 (on pages 9-18) for frame size combination for each servo motor manufacturer.

\*Refer to Selection Table 3 (on pages 20, 22-23) for rated torque, allowable maximum input speed, allowable peak torque, and allowable radial load for each frame size.

\*Refer to Selection Table 3 (on pages 21) for %ED of each speed.

\*Refer to Selection Table 3 (on page 20) for allowable peak torque at startup for combinations marked ●.

\*Note the no load running torque on this page when using combinations with [ ].

\*Consult us when no load running torque is too large for your application. Special models for lowering no load running torque are available on request.

## Page of Dimension Table

[Page]

Frame Size	Output Shaft Type	Reduction Ratio								
		3.7	5	9	11	15	21	33	45	81
P110	Solid Shaft (N, W)	26	27	28	29	30	31	32	33	34
	Flange Shaft (F)	53	54	55	56	57	58	59	60	61
P120	Solid Shaft (N, W)	35	36	37	38	39	40	41	42	43
	Flange Shaft (F)	62	63	64	65	66	67	68	69	70
P130	Solid Shaft (N, W)	44	45	46	47	48	49	50	51	52
	Flange Shaft (F)	71	72	73	74	75	76	77	78	79

Note: \*Refer to Selection Table 3 (on pages 20, 22-23) for rated torque, allowable maximum input speed, allowable peak torque, and allowable radial load for each frame size.

\*Check the value of no load running torque in Selection Table 1 (page 8) when using the combinations marked with  $\Delta$ .

Consult us for larger no load running torque is larger. Specialized units may be available.

\*Refer to Selection Table 3 (on page 20) for allowable peak torque at startup for combinations marked ●.

P1 Type

- \*1: Rated torque is the allowable value of the average load torque at the output shaft. The rated torque for the input speed of 1000 r/min or less is the same as the rated torque of 1000 r/min.
- \*2: Maximum allowable torque when startup and stop during operation cycle.
- \*3: Maximum allowable value of the shock torque at emergency stop or external shock torque. Should be less than 1,000 times in one lifetime.
- \*4: Maximum allowable input speed when not under constant operation condition.
- \*5: Allowable constant operation hours for intermittent operation condition (Consult us when exceeding or when continuously operating).
- \*6: Some values are not allowable depending on the input shaft diameter.  
Make sure to follow the method of motor attachment in page 88.

\*1: Radial load is the value applied to the middle of the output shaft (at axial load).

\*2: Axial load is the value applied to the center of the output shaft (at radial load).

Multiply radial load locating factor to the value in the above table when the radial load is applied to locations other than the middle of the output shaft.

Fig. 2 Radial Load Location Factor

# Selection Procedure

## Flow Chart and Formula of Selection

Fig. 4 Load Pattern

$n_1$ : Average input speed at acceleration when as in Fig 4:  $n_1 = \frac{n_2}{2}$  [r/min]  
 $n_2$ : Input speed at normal operation  
 $n_3$ : Average input speed at deceleration when as in Fig 4:  $n_1 = n_3 = \frac{n_2}{2}$  [r/min]  
 $t_1$ : Acceleration time [s]  
 $t_2$ : Steady operation time [s]  
 $t_3$ : Deceleration time [s]  
 $t_o$ : Operation time [s]  
 $t_p$ : Stop time [s]  
 $T$ : Operation cycle [s]  
 $T_1$ : Starting peak torque [Nm]  
 $T_2$ : Steady operation torque [Nm]  
 $T_3$ : Stopping peak torque [Nm]

Determine output following page 80  
 Actual load moment  $\leq$  allowable moment  
 Calculated main bearing lifetime  $\leq$  requested lifetime  
 \*Calculation is theoretical.

Raise frame size

# Selection Procedure

Calculation in Load Condition of Fig. 4

- Average input speed  $n_E = \frac{t_1 \cdot n_1 + t_2 \cdot n_2 + t_3 \cdot n_3 + \dots + t_n \cdot n_n}{t_o}$  ..... Formula 1      $n = 4, 5, 6, \dots$

- Average output torque  $T_E = \left( \frac{t_1 \cdot n_1 \cdot T_1^{10/3} + t_2 \cdot n_2 \cdot T_2^{10/3} + t_3 \cdot n_3 \cdot T_3^{10/3} + \dots + t_n \cdot n_n \cdot T_n^{10/3}}{t_o \cdot n_E} \right)^{0.3} \times F_{s2}$  ..... Formula 2      $n = 4, 5, 6, \dots$   
 (Table 3)

- Allowable rating output torque at average input speed  $T_{OE} = \left( \frac{3000}{n_E} \right)^{0.3} \times T_o$  ..... Formula 3

$T_o$ : Rated output torque at input speed 3000 r/min  
 Selection Table 3 (Rating Table)  
 Page 20-21

- %ED      $\%ED = \frac{t_o}{T} \times 100$  ..... Formula 4

### %ED Calculation at Average Input Speed

#### Interpolation method

$$\%ED(x) = \frac{y_i(x - x_{i+1}) - y_{i+1}(x - x_i)}{x_i - x_{i+1}}$$

%ED(x): Calculated %ED

x: Average input speed

$x_i$ : Speed lower than the average input speed on the rating table

$y_i$ : Allowable %ED at the above speed

$x_{i+1}$ : Speed higher than the average input speed on the rating table

$y_{i+1}$ : Allowable %ED at the above speed

Table 3 Fs2 Load factor

Loading condition	Fs2
Uniform load	1
Moderate shock	1-1.2
Heavy shock	1.4-1.6

### Example of Selection

Evaluate ANFX-P120F-7ZLD-15 for following specification.

Specification:  $T_A$ : Acceleration peak torque 100 Nm  
 $T_R$ : Normal running torque 30 Nm  
 $T_B$ : Peak torque at breaking 80 Nm  
 Shock torque: 2000 Nm  
 (700 times during overall lifetime)  
 $n_A$ : Average input speed during acceleration 1500 r/min  
 $n_R$ : Input speed with normal running 3000 r/min  
 $n_B$ : Average input speed during deceleration 1500 r/min

$t_A$ : Acceleration time 0.2s  
 $t_R$ : Normal running time 5.0s  
 $t_B$ : Deceleration time 0.2s  
 $t_P$ : Total running time 3.0s  
 $t_o$ : Standstill time 5.4s  
 $T$ : Single cycle time 8.4s

Application is assumed to have almost no load.

Calculation: Average input speed  $n_E = \frac{0.2 \times 1500 + 5.0 \times 3000 + 0.2 \times 1500}{5.4} = 2889$  [r/min]

Average output torque  $T_E = \left( \frac{0.2 \times 1500 \times 100^{10/3} + 5.0 \times 3000 \times 30^{10/3} + 0.2 \times 1500 \times 80^{10/3}}{5.4 \times 2889} \right)^{0.3} \times 1 = 39.6$  [Nm]

- Allowable rating output torque at average input speed  $T_{OE} = \left( \frac{3000}{2889} \right)^{0.3} \times 46.5 = 47.0 \geq 39.6 \rightarrow$  Select ANFX-P120F-7ZLD-15 temporarily.

- Check Average output torque 39.6 < 47.0.....OK

- Calculate %ED  $\%ED = \frac{5.4}{8.4} \times 100 = 64.3\%$

- Check Average output torque 20 [min] = 1200 [s] > 5.4 [s].....OK

$$\frac{90(2889 - 3000) - 70(2889 - 2000)}{2000 - 3000} = 72$$

72% > 64.3%.....OK

- Evaluate maximum input speed 3000 [r/min] < 6000 [r/min]
- Evaluate peak torque at acceleration and deceleration 100 [Nm] < 185 [Nm]
- Evaluate shock torque 200 [Nm] < 250 [Nm] (1000 times during entire lifetime)

Selection Table 3 (Rating Table) Page 20-21

ANFX-P120F-7ZLD-15 is selected by the process above.

# Durability Check of Output Shaft Part

P1 Type of IB Series uses angular bearing to allow high maximum load moment.

Make sure that your load moment do not exceed the allowable value through the following calculation.

## 1. Check Maximum Load Moment

$$M_{max} = \frac{F_{rmax} \cdot (L_c + L_r) + F_{amax} \cdot L_a}{10^3} \quad \dots (1)$$

Make sure that:  $M_{max} \leq M_c$

Table 4 Symbol in Formula (1)

$F_{rmax}$	Maximum radial load during the operation pattern	N [kgf]	Refer to Fig. 6.
$F_{amax}$	Maximum axial load during the operation pattern	N [kgf]	
$L_r, L_c, L_a$	Load application location	mm	

Table 5 Allowable Moment for P1 Type

Frame size	Allowable moment $M_c$	
	Nm	kgfm
P110	70	7.13
P120	300	30.6
P130	620	63.2

Table 6 Dimensions

Frame size	Dimension [mm]				
	LB	LC	S	L	Z
P110	52.76	42.38	2	28	19.62
P120	82.56	64.53	2	42	25.97
P130	109.02	86.26	4	82	63.24

P110 Allowable Load Diagram for Moment and Axial Load

P120 Allowable Load Diagram for Moment and Axial Load

P130 Allowable Load Diagram for Moment and Axial Load

- Consult us when the radial load is exerted on the location exceeding the range of "L + S."
- Consult us when the value exceeds the range of allowable load. Units may sometimes be used without problem for some cases, depending on the direction of axial load and the leverage point of the load.

Fig. 5 External Load Effect diagram

\*: \*Refer to Fig. 6.

Fig. 6 shows the load of each period in the specific operation pattern.

# Durability Check of Output Shaft Part

P1 Type

## 2. Check Equivalent Load Bearing Lifetime

Check lifetime by converting to equivalent load when radial or axial load varies.

Equivalent radial load:  $F_{re}$

$$F_{re} = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot (|Fr_1|)^3 + n_2 \cdot t_2 \cdot (|Fr_2|)^3 + \dots + n_n \cdot t_n \cdot (|Fr_n|)^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}} \dots(2)$$

Equivalent axial load:  $F_{ae}$

$$F_{ae} = \sqrt[3]{\frac{n_1 \cdot t_1 \cdot (|Fa_1|)^3 + n_2 \cdot t_2 \cdot (|Fa_2|)^3 + \dots + n_n \cdot t_n \cdot (|Fa_n|)^3}{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}} \dots(3)$$

Equivalent output speed:  $Neo$

$$Neo = \frac{n_1 \cdot t_1 + n_2 \cdot t_2 + \dots + n_n \cdot t_n}{t_1 + t_2 + \dots + t_n} \dots(4)$$

Fig. 6 Example of Load Fluctuation

Table 7 Axial Load Direction and Dynamic Equivalent Load Formula

Axial Load Direction	Load Condition	Bearing Category	Axial Load	Dynamic Equivalent Load
 (Applied to motor side)	$\frac{R_B}{2Y_2} + F_{ae} \geq \frac{R_A}{2Y_2}$	Bearing A	$F_{aA} = \frac{R_B}{2Y_2} + F_{ae}$	$P_A = X \cdot R_A + Y \cdot F_{aA}$ Note: When $P_A < R_A$ , use $P_A = R_A$ .
		Bearing B	-	$P_B = R_B$
	$\frac{R_B}{2Y_2} + F_{ae} < \frac{R_A}{2Y_2}$	Bearing A	-	$P_A = R_A$
		Bearing B	$F_{aB} = \frac{R_A}{2Y_2} - F_{ae}$	$P_B = X \cdot R_B + Y \cdot F_{aB}$ Note: When $P_B < R_B$ , use $P_B = R_B$ .
 (Applied to output side)	$\frac{R_B}{2Y_2} \leq \frac{R_A}{2Y_2} + F_{ae}$	Bearing A	-	$P_A = R_A$
		Bearing B	$F_{aB} = \frac{R_A}{2Y_2} + F_{ae}$	$P_B = X \cdot R_B + Y \cdot F_{aB}$ Note: When $P_B < R_A$ , use $P_B = R_A$ .
	$\frac{R_B}{2Y_2} > \frac{R_A}{2Y_2} + F_{ae}$	Bearing A	$F_{aA} = \frac{R_B}{2Y_2} - F_{ae}$	$P_A = X \cdot R_A + Y \cdot F_{aA}$ Note: When $P_A < R_A$ , use $P_A = R_A$ .
		Bearing B	-	$P_B = R_B$

# Mechanical Precision of Output Part of the Reducer

Mechanical precision of solid shaft (with and without key) and flange shaft is indicated below.

Output Shaft: Solid Shaft (with and without key)

Fig. 7

Output Shaft: Flange Shaft

Fig. 8

# Motor Attachment Procedure

Either straight type, shaft with keyway, or D shaft may be attached to the motor shaft, because special coupling is used for shaft connection part of reducer and motor. Follow the process below from (1) through (7) for assembly. (Remove key while assembly for shaft with keyway.)

- (1) Place reducer on an appropriate worktable with output shaft on the bottom side.
- (2) Remove fitting of the setting hole (1 place) of the reducer unit (① in figure below).
- (3) Match the location by turning by hand to tighten tightening bolt of the coupling into setting hole of the reducer unit (② in figure below).
- (4) Insert motor shaft into the center hole of the coupling, press in vertically and fit the pilot part of the reducer unit and motor.
- (5) Tighten motor and reducer unit with motor attachment bolt (④ in figure below).
- (6) Tighten coupling tightening bolt through the setting hole of the side of the reducer unit using a torque wrench bolt (④ in figure below). Refer to Table 12 for necessary tightening torque.

Table 15

Coupling hole diameter	Tightening bolt	Tightening torque	Allowable transmission torque
mm		N·m	N·m
φ6	M3	1.67	9.18
φ8			7.93
φ9			22.0
φ10	M4	3.92	22.7
φ11			24.9
φ14			26.4
φ16	M5	7.35	49.6
φ19			52.9
φ22	M6	8.83	61.8
φ24			66.2
φ28			78.3
φ35	M8	21.6	99.2

Make sure that the selected unit can allow maximum emergency torque (peak torque at start and stop) in your operation cycle.

$$\frac{\text{Maximum emergency torque (Peak torque at start or stop)}}{\text{Reduction ratio}} \leq \text{Allowable transmission torque}$$

- (7) Insert fitting (1 place) in the setting hole of the joint cover.

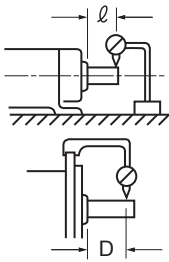

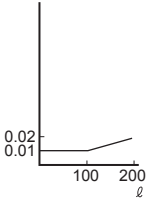

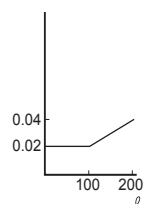

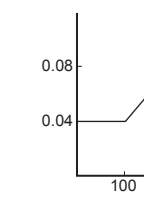

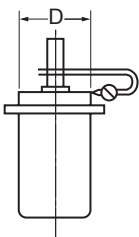

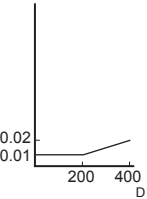

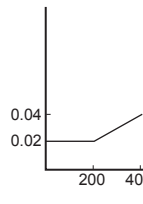

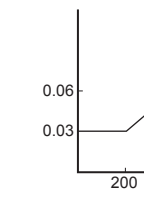

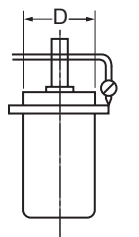

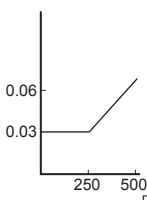

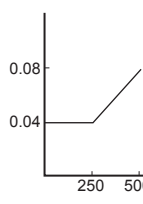

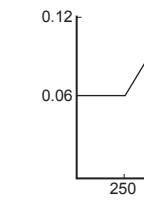

Fig. 9

Table 16

Type	Measuring item	Measuring method	Sketch of measurement	Measuring Instrument	Work accuracy		
					Grade AA	Grade A	Grade B
Flange type	Run-out of shaft end	Secure the dial gauge on the floor or flange surface. Place the probe of the dial gauge on the circumference close to the shaft end. Turn the shaft once. Difference between the observed maximum and minimum values is the measured value.		Dial gauge	Work accuracy = 0.01 when $l \leq 100$ As below when $l \geq 100$ 	Work accuracy = 0.02 when $l \leq 100$ As below when $l \geq 100$ 	Work accuracy = 0.04 when $l \leq 100$ As below when $l \geq 100$ 
	Eccentricity of flange engagement O.D.	Secure the dial gauge on the shaft close to the flange surface. Place the probe of the dial gauge on the circumference of flange connection. Turn the shaft once. Half of the difference between the observed maximum and minimum values is the measured value.		Dial gauge	Work accuracy = 0.01 when $D \leq 200$ As below when $D > 200$ 	Work accuracy = 0.02 when $D \leq 200$ As below when $D > 200$ 	Work accuracy = 0.03 when $D \leq 200$ As below when $D > 200$ 
Flange type	Perpendicularity with respect to flange surface	Secure the dial gauge on the shaft close to the flange surface. Place the probe of the dial gauge on the flange surface close to flange circumference. Turn the shaft once. The difference between the observed maximum and minimum values is the measured value.		Dial gauge	Work accuracy = 0.03 when $D \leq 250$ As below when $D > 250$ 	Work accuracy = 0.04 when $D \leq 250$ As below when $D > 250$ 	Work accuracy = 0.06 when $D \leq 250$ As below when $D > 250$ 

P1 Type

# Warranty

<p>Warranty Period</p>	<p>The warranty period for the Products shall be 18 months after the commencement of delivery or 18 months after the shipment of the Products from the seller's works or 12 months from the Products coming into operation, whichever comes first.</p>
<p>Warranty Condition</p>	<p>In the event that any problem or damage to the Product arises during the "Warranty Period" from defects in the Product whenever the Product is properly installed and combined with the Buyer's equipment or machines, maintained as specified in the maintenance manual, and properly operated under the conditions described in the catalog or as otherwise agree upon in writing between the Seller and the Buyer or its customers; the Seller will provide, at its sole discretion, appropriate repair or replacement of the Product without charge at a designated facility, except as stipulated in the "Warranty Exclusions" as described below. However, if the Product is installed or integrated into the Buyer's equipment or machines, the Seller shall not reimburse the cost of: removal or re-installation of the Product or other incidental costs related thereto, any lost opportunity, any profit loss or other incidental or consequential losses or damages incurred by the Buyer or its customers.</p>
<p>Warranty Exclusions</p>	<p>Notwithstanding the above warranty, the warranty as set forth herein shall not apply to any problem or damage to the Product that is caused by:</p> <ol style="list-style-type: none"> <li>1. installation, connection, combination or integration of the Product in or to the other equipment or machine that is rendered by any person or entity other than the Seller;</li> <li>2. insufficient maintenance or improper operation by the Buyer or its customers, such that the Product is not maintained in accordance with the maintenance manual provided or designated by the Seller;</li> <li>3. improper use or operation of the Product by the Buyer or its customers that is not informed to the Seller, including, without limitation, the Buyer's or its customers, operation of the Product not in conformity with the specifications, or use of lubricating oil in the Product that is not recommended by the Seller;</li> <li>4. any problem or damage on any equipment or machine to which the Product is installed, connected or combined or on any specifications particular to the Buyer or its customers;</li> <li>5. any changes, modifications, improvements or alterations to the Product or those functions that are rendered on the Product by any person or entity other than the Seller;</li> <li>6. any parts in the Product that are supplied or designated by the Buyer or its customers;</li> <li>7. earthquake, fire, flood, sea-breeze, gas, thunder, acts of God or any other reasons beyond the control of the Seller;</li> <li>8. normal wear and tear, or deterioration of the Products, parts, such as bearings, oil-seals;</li> <li>9. any other troubles, problems or damage to the Product that are not attributable to the Seller.</li> </ol>

## SAFETY PRECAUTIONS

- Observe the safety rules for the installation site and equipment strictly (Industrial safety and health law, technical standard for electric facilities, extension rules, plant explosion guidelines, building standards law, etc).
- Read the maintenance manual carefully before use. Request a copy from the distributor of the Product or our Sales Department if the maintenance manual is not handy. A copy of maintenance manual should always reach the actual user of the Product.
- Select a sufficient product for the usage condition and application.
- Install protective equipment on the machine side when the machine is used for applications which may cause loss of human life or significant loss in facility, such as use for human transportation or elevators.
- Install an oil pan or other preventive devices in case of oil leakage due to failure or termination of service life when the machine is used for food processing equipment, clean room, or other applications that are sensitive to oil.
